Watermark for iPod 11.1.2 is a small and simple batch utility to apply a watermark to the frames of your iPod videos. The watermark will show up on the lockscreen. It is really easy to use. All you need to do is drag and drop your videos to the app. This is how it works. The app will take your videos, copy them to a temp folder, and then copy them to the correct folder on the iPod, including updating the metadata information. It will also apply a watermark to each frame, and let you set the frame count. It will also handle the frame rate. This is the first app I have made in almost 3 years. So please bear with me. Watermark for iPod Screenshots: More coming soon... Watermark for iPod Tips and Tricks: \*\* The best way to install this app is to unzip it first and then drag and drop your videos to the app. This way it will update all your videos. If you do it in the other order you will have to manually

Is there a way to create the JSON object as a reference ID, or do I have to manually parse it instead? EDIT I just figured this out. What I needed was: var foo = JSON.parse(['+ myvalue + ']); A: Yes you can - the point of JSON.parse is to parse just the content. var myValue = 'data1'; var foo = '[' + myValue + '']; var parsed = JSON.parse
